

This AMI Service Information Binder has been designed for your convenience. It has a serial number stamped inside the back cover and is registered in your name. As new manuals are printed, they will be forwarded to you for insertion into your Binder. All you need to do is to insert the new information in the appropriate section as indicated.

You will notice that space is provided for all AMI Service Information, thus providing you with a convenient, single source.

An index is included in the front. You will notice that the Service Information is complete to date, beginning with the G-200 Phonograph. As new sections are sent to you, a revised replacement index will be included. In this way your Service Information Binder will be kept up to the minute.

This volume is marked Book I. As it becomes full, a second binder will be issued.

Additional binders may be obtained by writing to the Technical Publications Department.
